

Radheber für Wuchtmaschinen

Product Images

Description

- The pneumatic tire lift allows you to place a wheel easily and back-friendly on the shaft of the wheel balancer
- Ergonomic work is becoming more and more important in the modern car workshop, even more because wheels are getting bigger and heavier
- Damage-free mounting is priceless, especially for high quality rims
- It also prevents wheel fall on the shaft end and thus unnecessary recalibrations and damage to the shaft
- The lifter is controlled by a switch which, together with a sturdy handle, is positioned directly on the cart, giving the user full control of the position and security against falling of the wheel
- To support the ergonomics, the handle bar has a special C-shape to work without obstructions to the attachment of the wheel, two additional supports for cones or quick-release nut provides the comfort of having all the necessary tools quickly to hand
- A pneumatic air balloon allows the customer to position the wheel precisely by gently pressing down the wheel
- Suitable for the most common car wheel balancers
