Description

This pneumatic tyre-fitting aid was specially developed for ergonomic, damage-free and efficient wheel fitting on motor vehicles. Thanks to its purely pneumatic control, the unit requires no electrical components whatsoever, ensuring low-maintenance and consistently reliable operation in tough workshop environments.

The precise mechanism supports the lifting and positioning of heavy wheel-and-tyre combinations exactly at the wheel hub. An integrated catch hook reliably secures the wheel against falling during lifting and alignment. Lockable steering castors ensure a stable working position and maximum working safety, securely fixing the system at the desired place of use.

The integrated tool holder provides additional workflow efficiency: the impact wrench and required sockets are stored directly on the wheel lift and are always within easy reach. Thanks to its smooth-running chassis, the unit remains flexibly manoeuvrable at all times, sustainably simplifying workflows at different workstations.

Additional Information

Rated load capacity	65 kg
Lifting height max.	1200 mm
