## Description

---

The air-hydraulic scissor axle-free lift jack offers a powerful and precisely fitting solution for professional use on ATH drive-on scissor lifts and ATH four-post lifts. Thanks to the chassis included in the scope of delivery, the free-lift jack can be positioned exactly on the running rails of the main lift, ensuring flexible workflows for wheel, brake and chassis work.

The integrated air-hydraulic unit ensures powerful, reliable lifting of vehicle axles with minimal operator effort. For a safe and reliable connection, the axle-free lift jack is already equipped with a suitable pneumatic line, including a guide cable for proper attachment to the lift.

Plug-in extension pieces included in the scope of delivery enable the safe support of a wide variety of vehicle types and ensure flexible compensation of support points. A partial double powder-coating process provides excellent corrosion protection and guarantees high resistance to material stress in tough daily workshop use. The well-thought-out design combines high functional safety with durability for permanent professional use.
