Description

The air-hydraulic pit jack, with a load capacity of 13,000 kg, offers a powerful and reliable solution for demanding lifting tasks in professional vehicle maintenance. Equipped with fast and precise air-hydraulics, the lifting system features a rapid-traverse function for raising and lowering. This allows the cylinder to approach the support point quickly and retract time-efficiently once the lifting operation is complete, noticeably reducing process times in workshop operation.

The innovative, modern design sets new standards in workplace ergonomics: a clearly arranged control panel at an ergonomic working height ensures back-friendly, safe and precise control of all lifting movements. Thanks to its infinitely adjustable chassis, the pit jack fits universally to all common pit widths and can be effortlessly integrated into existing service pits.

The scope of delivery includes a high-quality lifting beam for universal vehicle support. It ensures a wide, stable load distribution at the vehicle's manufacturer-specific support points and significantly increases safety during complex lifting operations. The solid construction and practice-oriented equipment make this pit jack an indispensable tool for maximum workshop efficiency.
