

Plastic mounting head (adapter Ø 28.25mm)

Product Images

Description

The plastic mounting head was specifically developed for the gentle mounting and demounting of tyres on sensitive aluminium rims in the automotive and motorcycle sector. The material used, which is extremely robust and flexible, offers the utmost level of security against mechanical damage. The well-conceived geometry of the mounting head noticeably facilitates the initial positioning and effectively protects the tyre fabric as well as the rim flange from notches or cracks.

For maximum flexibility and precise alignment, the integrated metal mount is rotatably mounted through 180° and fixed distortion-free via four solid screws. The mounting head fitting has a standard bore diameter of 28.25 mm. This makes the accessory perfectly suited for the ATH M92, M72, M52 and M32 tyre changers as well as for the majority of common third-party makes with a matching mount size.
