

Wheel lifter for tyre changers M72/M52

Product Images

Description

The precision-fit wheel lift for the M52 and M72 tyre changers offers a professional solution for ergonomic workstation design in everyday tyre service. Fixed bolting to the front of the tyre changer ensures high stability and integrates seamlessly into the existing mounting process.

Lifting the wheel takes place directly at the side of the bead breaker, which minimises walking distances and noticeably simplifies handling before and after bead breaking. Through integration into the workshop's own compressed-air network, the lifting motion can be precisely and controllably steered to ensure safe positioning. The targeted relief of the operator protects the back, prevents fatigue and increases efficiency at the mounting station.

The low-maintenance device design also guarantees consistently high reliability in intensive daily workshop use.
