

Motorcycle / scooter mounting head (adapter Ø 28.25mm)

Product Images

Description

The motorcycle and scooter mounting head with a fitting diameter of 28.25 mm offers the ideal solution for precise wheel mounting in the two-wheeler and small-equipment segment. Made of high-strength steel, this mounting head is characterised by maximum dimensional stability and a long service life, even under high daily strain in workshop operation.

The geometry of the head is specifically matched to the particular contours and sidewall shapes of motorcycle, scooter and various small tyres to ensure tyre-gentle and efficient demounting and mounting. Thanks to the precisely fitting mount, the mounting head can be quickly and easily retrofitted or exchanged on compatible tyre changers, which sustainably increases the workshop's flexibility and service capacity.
