

Motorcycle bead breaker shovel long

Product Images

Description

The extended motorcycle tyre bead breaker blade was specifically developed for the requirements of professional two-wheeler tyre fitting. Thanks to its adapted contour and extended lever arm, the blade engages the tyre bead optimally, allowing the bead-breaking process to be carried out with precision and reduced effort. The specific shape protects sensitive rim edges and spoke assemblies from damage and allows safe release even in the case of tightly seated tyre beads. Made from high-strength material, the tool offers lasting dimensional stability under high loads and represents an efficient system extension for tyre changers in daily workshop use.
