

Cone set light truck 114–174 mm

Product Images

Description

The light truck adapter set represents a targeted extension for specialist vehicle workshops for the process-reliable handling of heavy commercial vehicle wheels on wheel balancers with a standard 40 mm shaft. The precisely matched combination of a large centring cone and a form-fitting flange enables a tilt-proof and perfectly centred seating of wheels with large hub bores. This systematically eliminates assembly and measurement errors that lead to time-consuming rework.

Thanks to full compatibility with the W42, W62 and W82 wheel balancer models, the set integrates seamlessly into existing workshop structures. Made from high-strength, hardened quality steel, the adapter system permanently withstands the extreme mechanical loads of daily workshop operation. The material's wear resistance guarantees consistently high centring accuracy over the long term and represents an investment-secure solution for the professional tyre logistics of vans and light trucks.
