

Lifting extension kit for scissor lift

Product Images

Description

This extension set has been specifically designed for demanding workshop use, optimising the pick-up capacity of compatible lifts for vehicles with a large wheelbase. It guarantees safe and stable lifting of vehicles whose lifting points are spaced longitudinally up to 2,610 mm apart, measured between the pick-up centre points.

The construction impresses with its robust design and high torsional rigidity. The set includes two lift point extensions as well as a total of eight turntables with steplessly adjustable double thread. Four turntables allow height adjustment in the range of 110 mm to 143 mm, while a further four turntables cover the range of 130 mm to 183 mm. This variability allows precise adaptation to different sill and underbody structures.

The set is precisely matched and fully compatible with the ATH Flex Lift 30, ATH Frame lift 30FZ and ATH Frame lift 35FZ models.

Additional Information

Overall height	18,5 cm
