

ATH StorageRack Air

Product Images

Description

The ATH StorageRack is mounted directly onto the mounting machine, bringing all consumables and tools within the operator's immediate reach. This shortens walking distances and keeps the workplace tidy.

The robust, powder-coated steel construction is modular in design: it serves as a pure system shelf, or can additionally accommodate a digital tyre inflation computer that automatically inflates mounted wheels in parallel with the next work step.

Features:

Direct mounting: Short working distances thanks to fixed attachment to ATH mounting machines

Workplace order: Compartments for valves, levers and accessories

Modular system: Usable either as a pure tool rack or including a filling station

Efficient workflow: With filling computer fitted, parallel inflation with auto-stop is possible

Workshop-ready: Robust, torsion-resistant industrial sheet-steel construction
