

ATH Hytron Lift® 2.45 GA

Product Images

Description

Modern design meets future-oriented lifting technology

The electrohydraulic 2-post lift impresses with space-saving triangular columns, maximum installation flexibility and state-of-the-art control technology. Two fully independent columns communicate wirelessly via industrial radio and operate with precise synchronization thanks to ATH HeartBeat® – without any obstructive cross connection.

The innovative ATH Hytron Lift® concept, with each column having its own hydraulic power unit, speed and pressure control, as well as durable ATH plunger cylinders, ensures high operational safety and easy maintenance. MicroAnts Safety Control, two control units and energy sets on both columns enable comfortable and safe working.

3-part front lifting arms, double-jointed rear arms and double-telescopic support pads offer maximum flexibility when positioning the vehicle. Plug & Play: position, anchor, fill with oil – ready.

Additional Information

Rated load capacity	4500 kg
Drive-through width	2333 mm
Overall height	3220 mm
Lifting/Lowering time	32 32 s
Power supply voltage	3x 400V / C16A
Concrete strength	C 25/30 4000 x 2000 x 200 mm
Color	RAL 7016 / RAL 9005
